

supermod::descriptionType

```
classDiagram
    class supermod {
        <<abstract>>
        <<abstract>>descriptionType
    }
    class doxygen {
        <<package>>
        <<package>>generated {
            <<package>>compound {
                <<class>>descriptionTypeSub
            }
        }
    }
    doxygen.generated.compound.descriptionTypeSub --|> supermod
```

The diagram illustrates a class hierarchy. At the top is the 'supermod::descriptionType' class, which is an abstract class with two empty compartments. Below it is the 'doxygen.generated.compound.descriptionTypeSub' class, which is a concrete subclass. A blue arrow with an open triangle head points from the subclass to the superclass, indicating inheritance. The subclass has a third compartment containing the method '+ __init__()'.

doxygen.generated.compound.description
TypeSub

+ __init__()
