

supermod::memberdefType

```
classDiagram
    class supermod_memberdefType["supermod::memberdefType"]
    class doxygen_generated_compound_memberdefTypeSub["doxygen.generated.compound.memberdefTypeSub"]
    doxygen_generated_compound_memberdefTypeSub --|> supermod_memberdefType
```

The diagram illustrates a class hierarchy. At the top is the class 'supermod::memberdefType', which has an empty box below its name. Below it is the class 'doxygen.generated.compound.memberdefTypeSub', which has a method '+ __init__()' listed in its bottom section. A blue arrow with a hollow triangle head points from the 'doxygen.generated.compound.memberdefTypeSub' class to the 'supermod::memberdefType' class, indicating that 'doxygen.generated.compound.memberdefTypeSub' inherits from 'supermod::memberdefType'.

doxygen.generated.compound.memberdef
