

supermod::reimplementType

```
classDiagram
    class supermod_reimplementType["supermod::reimplementType"]
    class doxygen_generated_compound_reimplementTypeSub["doxygen.generated.compound.reimplementTypeSub"]
    doxygen_generated_compound_reimplementTypeSub --|> supermod_reimplementType
```

The diagram illustrates a class hierarchy. At the top is the base class 'supermod::reimplementType', represented by a white box with a thin black border and two empty internal compartments. Below it is the derived class 'doxygen.generated.compound.reimplementTypeSub', represented by a grey box with a thick black border and two compartments. The first compartment of the derived class contains the class name, and the second contains the method '+ __init__()'. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

doxygen.generated.compound.reimplement
TypeSub

+ __init__()
